

INSTALLATION INSTRUCTIONS

LIFTING AND SECURING SYSTEM

Please read *both* sides of this instruction sheet before beginning installation.
Confirm that all components have been packaged.

Examine Hardware poly-bag containing an assembled Pulley System consisting of 2 Pulley Blocks (Upper and Lower) and Hoisting Line; 1 Screw Hook; 1 Line Cleat with 2 Screws; and 1 Wood Mounting Block.

WARNING:

If children, or others, have access to hardtop storage area, you may want to mount Line Cleat high enough to prevent accidental release of hoist line.

Fig. 1

- Screw Hook **must** be screwed into structurally-sound ceiling joist or other support (fig.1). If you have any doubts about how to locate a proper ceiling support, inquire with a contractor. Steel Ceiling Ring goes onto Screw Hook. Ring should be located on garage ceiling so it (and Pulley/Crossbar assembly) can be *centered* over balance point of hardtop (see Side 2).

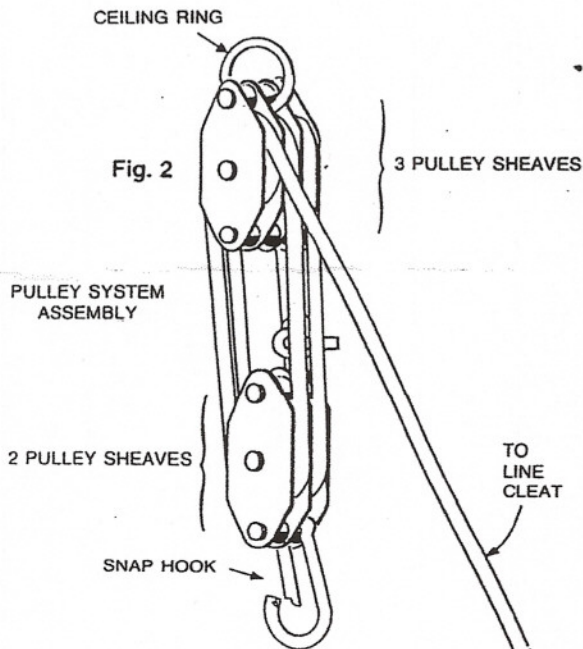

Fig. 2

- If garage wall has been drywalled (or otherwise finished), we advise the use of Wood Mounting Block supplied (fig.3). Locate a wall stud at a convenient location and nail Wood Block to it at eye level. Then, mount Line Cleat to Wood Block, using screws supplied. Wood Block and Line Cleat **MUST** be firmly attached to wall stud. Once hardtop has been raised to desired height, secure it by weaving Hoisting Line around two "fingers" of Line Cleat, in a series of at least three "figure 8s." Invert last loop so that rope pulls against itself (fig.4). *Note:* If children, or others, have access to hardtop storage area, you may want to provide protection against Hoisting Line's accidental (or intentional) release.

- Attach pulley assembly's steel Ceiling Ring to Screw Hook.
- Attach pulley assembly's Snap Hook to ring at lifting point of hardtop apparatus.

WARNING: These instructions are intended to be followed explicitly. Failure to do so may result in failure of your hoist. No other warranties expressed or implied.
